ASSIGNMENT - 4

Problem Statement :- SMS SPAM Classification

Assignment Date	26 October 2022
Student Name	S.SANDHIYA
Student Reg Number	420619104031
Maximum Marks	2 Marks

1. Download the Data set: - Data set

https://www.kaggle.com/code/kredy10/simple-lstm-for-text-classification/data

	ham	0-7	first lar The	and the second															

2. Import required library

Import the necessary libraries

```
import pandas as pd
import numpy as np
import matplotlib.pyplot as plt
import seaborn as sns
from sklearn.model_selection import train_test_split
from sklearn.preprocessing import LabelEncoder
from keras.models import Model
from keras.layers import LSTM, Activation, Dense, Dropout, Input, Embedding
from keras.optimizers import RMSprop
from keras.preprocessing.text import Tokenizer
from keras.preprocessing import sequence
from keras.utils import to_categorical
from keras.callbacks import EarlyStopping
%matplotlib inline
```

3. Read dataset and do pre-processing

Preprocessing:

```
In [17]:

from tensorflow.keras.preprocessing.text import Tokenizer
from tensorflow.keras.layers import Dense
from tensorflow.keras.layers import Dense
from tensorflow.keras.layers import Dense
from tensorflow.keras.layers import Dense
from tensorflow.keras.layers import Flatten
from tensorflow.keras.layers import Flatten
from tensorflow.keras.layers import Embedding
from tensorflow.keras.layers import Dense
fr
```

4. Create Model

WordClouds

WordCloud: Ham messages

In [10]:

show_wordcloud(data_ham, "Ham messages")

Ham messages

WordCloud: Spam messages

In [11]:

show_wordcloud(data_spam, "Spam messages")

Spam messages

5. Add Layers (LSTM, Dense-(Hidden Layers), Output)

6.Compile the Mode

```
In [19]:    # pad documents to a max Length of 4 words
            max_length = 8
            padded train = pad_sequences(encoded_train, maxlen=max_length, padding='post')
padded_test = pad_sequences(encoded_test, maxlen=max_length, padding='post')
            print(padded_train)
           [[ 322 10 53 ... 30 349 1990]
[1992 2558 21 ... 203 1025 225]
            [ 83 1443 4 ... 2 3794 3795]
            [1477 30 2063 ... 239 30 2064]
[763 1679 1161 ... 0 0 0]
[8 155 20 ... 8 290 175]]
   In [20]: # define the model
    model = Sequential()
                model.add(Embedding(vocab_size, 24, input_length=max_length))
                model.add(Flatten())
                model.add(Dense(500, activation='relu'))
                model.add(Dense(200, activation='relu'))
                model.add(Dropout(0.5))
                model.add(Dense(100, activation='relu'))
                model.add(Dense(1, activation='sigmoid'))
                model.compile(optimizer='rmsprop', loss='binary_crossentropy', metrics=['accuracy'])
                # summarize the model
```

Model:	"sequential_1"
--------	----------------

print(model.summary())

Layer (type)	Output S	hape	Param #
embedding_1 (Embedding)	(None, 8	3, 24)	190920
flatten_1 (Flatten)	(None, 1	192)	0
dense_2 (Dense)	(None, 5	500)	96500
dense_3 (Dense)	(None, 2	100)	100200
dropout (Dropout)	(None, 2	100)	0
dense_4 (Dense)	(None, 1	100)	20100
dense_5 (Dense)	(None, 1	1)	101
Total params: 407,821 Trainable params: 407,821 Non-trainable params: 0			
None			

7. Fit the Model

```
early_stop = EarlyStopping(monitor='val_loss', mode='min', verbose=1, patience=10)
# fit the model
model.fit(x=padded train,
        y=y_train,
        epochs=50,
        validation_data=(padded_test, y_test), verbose=1,
callbacks=[early_stop]
140/140 [===
Epoch 2/50
140/140 [===
                  ==] - 0s 3ms/step - loss: 0.0447 - accuracy: 0.9865 - val_loss: 0.0840 - val_accuracy: 0.9821
                            ===] - 0s 3ms/step - loss: 0.0136 - accuracy: 0.9969 - val_loss: 0.0997 - val_accuracy: 0.9839

```

```
In [30]:
with open('spam_model/tokenizer.pkl', 'wb') as output:
    pickle.dump(t, output, pickle.HIGHEST_PROTOCOL)
```

9. Test The Model

```
In [31]:
          s_model = tf.keras.models.load_model("spam_model")
          with open('spam_model/tokenizer.pkl', 'rb') as input:
              tokener = pickle.load(input)
          # s_model.summary()
In [38]:
          sms_spam = ["We know someone who you know that fancies you. Call 09058097218 to find out who. POBox 6, LS15HB "]
          sms_ham = ["I'll text Tanya when I get home, hang on"]
          sms proc = tokener.texts to_sequences(sms_ham)
          sms_proc = pad_sequences(sms_proc, maxlen=max_length, padding='post')
          pred = (model.predict(sms_proc) > 0.5).astype("int32").item()
          pred
In [39]:
          pred = (model.predict(sms_proc) > 0.5).astype("int32").item()
          pred
Out[39]; 0
In [33]:
          X_test[5]
Out[33]: "I'll text carlos and let you know, hang on"
```
